nursing is about growth yet it spends so much time focusing on disease and entropy

while the nursing role is expanding into advanced practice roles and twenty first century nursing is almost unrecognisable compared to its nineteenth century roots at the heart of nursing is growth sometimes called caring growth requires nurturing and while it is difficult to define without it nurses are merely medical technicians in the context of nursing health is about change change from a less healthy state to a more healthy state and the nurse's role is to promote that change whenever possible however change is difficult we are creatures of habit afraid of change and preferring the illusion of safety with the devil we know rather than the devil we don't know however when someone is ready to change they have already grown this book combines the author's twenty five years of experience in solution focused interactions and empirical evidence derived from his phd research to argue that solution focused interactions provide a means for nurses in all domains of nursing and midwifery to provide care that promotes growth and change in the people they work with while restoring and maintaining their enthusiasm for practice this book serves as an eminently practical introduction to how solution focused interactions can be used across nursing practice making use of transcripts and case studies to illustrate the ways in which nurses can help their patients to grow and change while also growing and changing themselves
